raygency

Webinar · The messy part of AI · 45 minutes

Your customers already asked. You weren't in the answer.

You leave knowing whether your brand is on the AI shortlist, how to check it every month, and how to put a number on it.

Varun Tyagi · Raygency

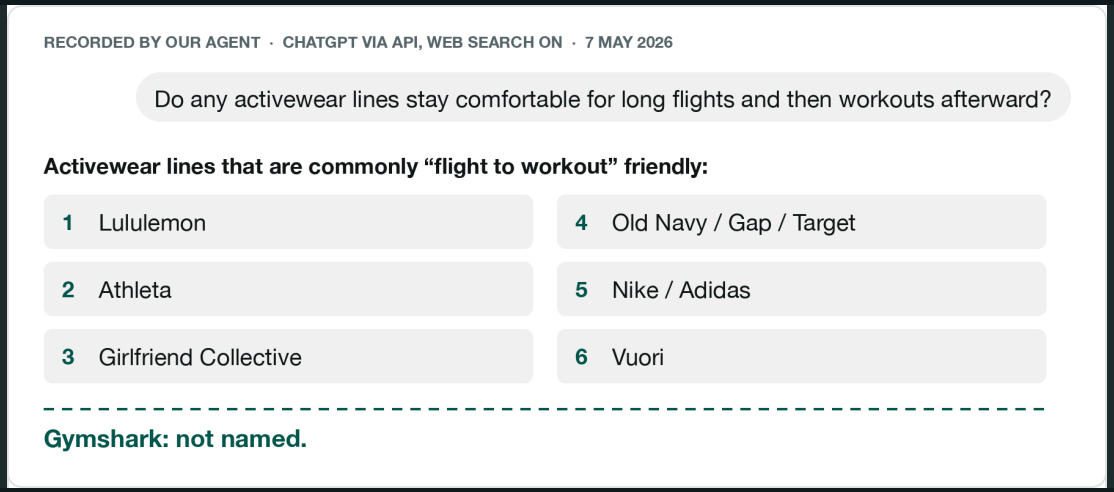

November 6, 2026 · hosted by Renuka Adnani · raygency.com

THE NEXT 45 MINUTES

How this runs

0:00	**One question about your category**	You ask it yourself, before I say a word about it
0:05	**The shortlist replaced the search**	What changed for your buyer, in their numbers
0:14	**How the assistant picks**	And what our agent found when it asked five of them
0:28	**Putting a number on it**	The ROI ladder, and a worksheet you fill in with your own figures
0:40	**Where this breaks, and Monday**	Three honest limits and three things to switch on this week

Six brands named. Gymshark wasn't one.

A question any traveller asks. Our agent put it to ChatGPT on 7 May 2026 and kept the answer exactly as it came back.

BEFORE WE START

Ninety seconds, three ways in

A · RUN IT

ChatGPT, logged out

A private window, so your own history doesn't get a vote.

B · LITE

Any assistant on your phone

Gemini, Claude, Perplexity, Copilot. Same question, smaller screen.

C · WATCH

Follow on screen

Shout a category in the chat and I run it live for you.

CHECKPOINT Type your letter in the chat. A, B or C.

YOUR TURN · 3 MIN

Ask it what your buyer asks

TYPE THIS

> What are the five best [your category] brands for [your kind of customer]? Give one reason for each.

One rule: never type your own brand name. Your buyer wouldn't. Then read who made the five, and the reason it gave.

CHECKPOINT In the chat: were you in the five? Yes, no, or who was.

01

The shortlist replaced the search

Hotel guests stopped reading the guidebook. They ask the concierge, and they go where the concierge sends them.

WHAT CHANGED

You used to compare. Now you get a shortlist.

SEARCH

Ten links, and you do the work

You open four tabs, compare, and decide on the brand's own site. Every brand on page one gets a look.

ANSWER

Three to six names, with reasons

The assistant compares for you. You trust the shortlist, and a brand left off it never gets the look.

When an AI Overview shows, clicks on the number one Google result fall 58%.

Ahrefs, 300,000 keywords, December 2023 vs December 2025, updated February 2026.

YOUR BUYER

Half your buyers ask the assistant first

51%

Start in a chatbot, not Google

B2B software buyers, March 2026. Eleven months earlier it was 29%.

69%

Changed vendor because of it

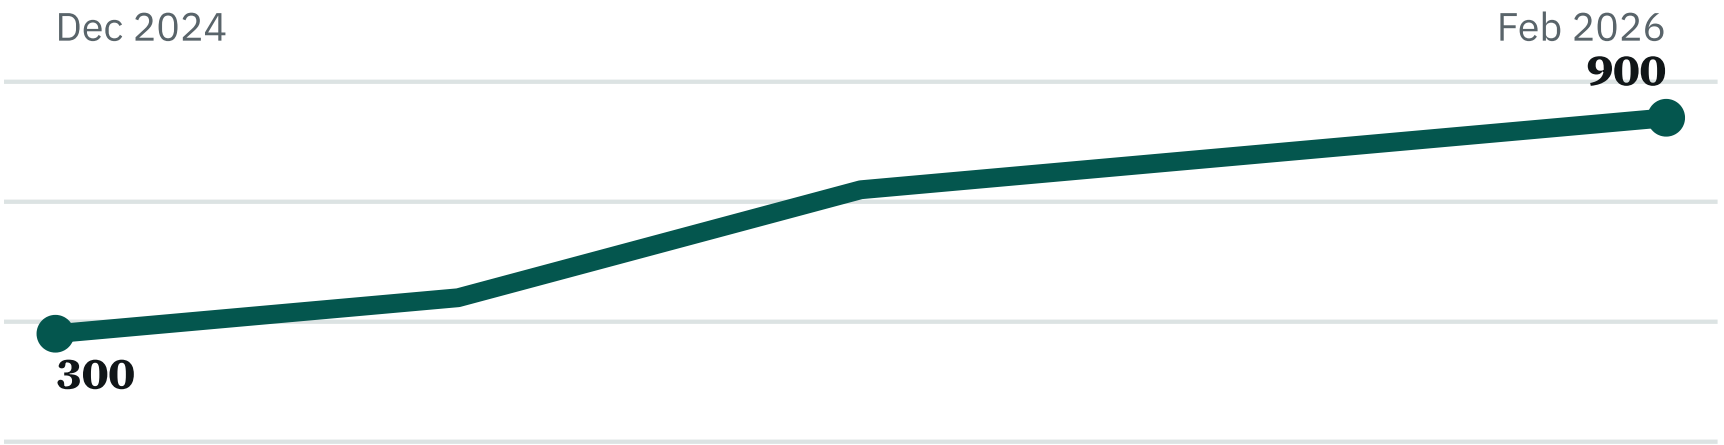

Picked a different vendor than planned after the chatbot's guidance.

Test like a buyer

Logged out, a fresh chat, never your brand in the prompt, five runs. Your history tells it you already like you.

G2, The Answer Economy: 2026 AI Search Insight Report, n = 1,076, April 2026.

One concierge desk tripled in fourteen months

300 million to 900 million a week. And that is one assistant of five.

OpenAI via TechCrunch, 27 February 2026. Five announced points, spaced by announcement, not by month.

The traffic is tiny. The decision isn't.

AI assistants send 0.19% of US referral traffic, so nobody on your team is watching them. But the winning vendor was on the Day One shortlist 95% of the time. The click was never where the decision happened.

02

The concierge names who other guests talk about

A good concierge doesn't read your brochure. They repeat what they hear from guests, staff and the local paper.

WHAT IT REWARDS

Being talked about beats being linked to

Correlation, not cause. The order is still the lesson.

Ahrefs, AI Overview brand visibility factors, 75,000 brands, Spearman correlation, August 2025.

WHAT MOVES IT

Write the sentence you want quoted

1

Add a quotation

A named expert or a named customer. Plus 41% visibility in the GEO study, KDD 2024.

2

Add a statistic

A specific, dated number with its source. Plus 31% in the same study.

3

Start with five pages

The five buyers already land on. Swap one adjective in each opening for a number. Keyword stuffing showed no lift.

The assistant can only repeat what somebody wrote down.

Give it a sentence worth repeating, on your site and on the sites that write about you.

What our agent did while I was asleep

Write

Read the brand and wrote 18 questions a buyer asks, never naming the brand.

Ask

Put every question to five engines, with web search switched on.

Score

Named or not, cited or not, and who else made the answer.

Find the gaps

The questions where a rival is named and you aren't.

Ninety answers, scored, while nobody watched. The same agent is in your kit.

GYMSHARK, FIVE MONTHS APART

Same score. Different questions.

ChatGPT

1 of 18

May: also one, on a different question

Claude

5 of 18

May: five, only four of them the same

Gemini

4 of 17

May: five of eighteen

Google

3 of 18

May: four of eighteen

Cited sites

77%

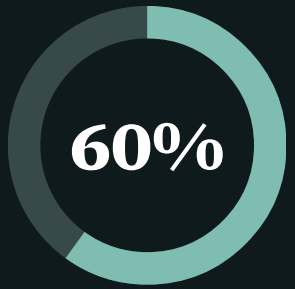

of October's sources weren't cited in May

Your score can hold still while the ground moves under it.

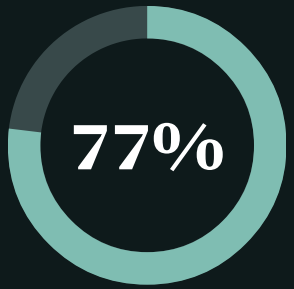

Raygency agent runs, 7 May and 17 October 2026. Same 18 questions, same models, API with web search on.

Most answers name nobody. Almost none cite you.

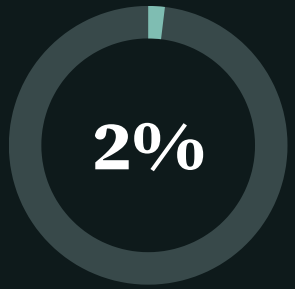

Named no brand at all

32 of 53 answers in October. 30 of 54 in May.

Cited sites new since May

The ground under the answer moved in five months.

Citations to gymshark.com

4 of 232 in October. The answer is written from other people's pages.

Raygency agent runs, Gymshark, 7 May and 17 October 2026. ChatGPT, Claude and Gemini; citations include Perplexity.

WHERE THE GAP IS

Gymshark wins trend questions, vanishes on how to

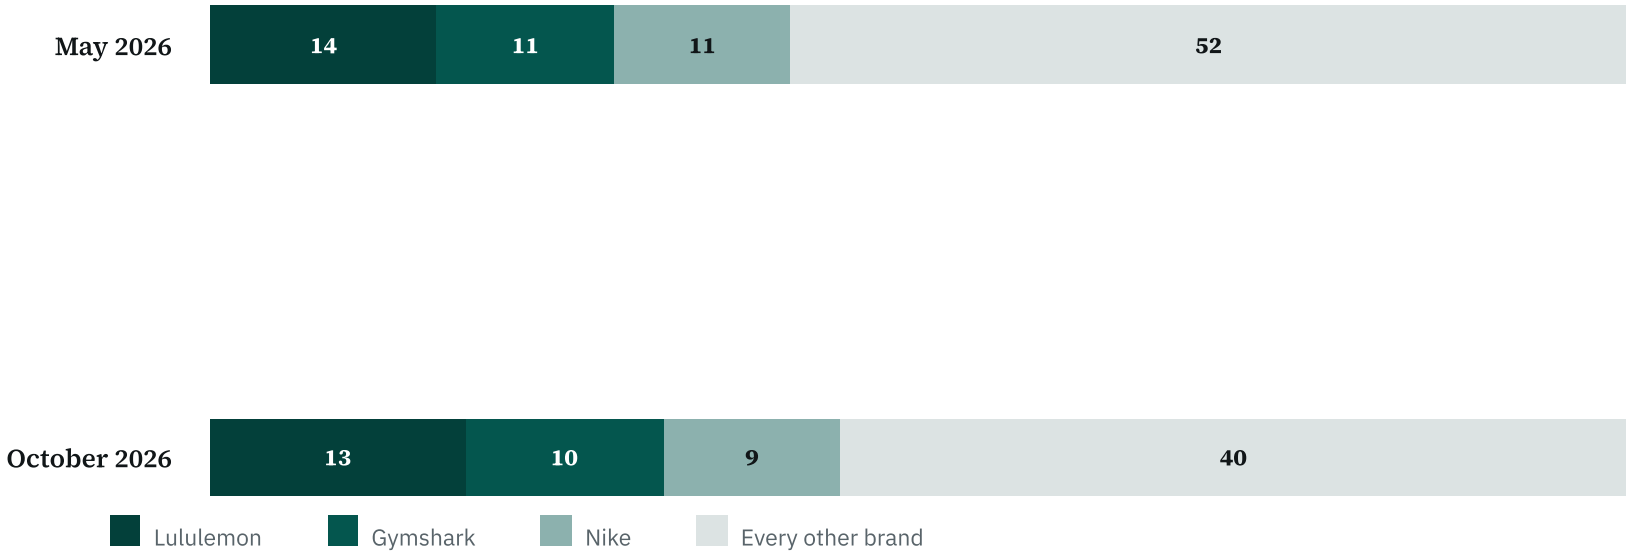

How to questions were 42 of the 107 answers. Gymshark made two. That gap is content, not ads.

Share of answers naming Gymshark, by question type. Both runs, ChatGPT, Claude and Gemini, 107 answers.

WHO THE CONCIERGE NAMES

Same three names on top, five months apart

Brand mentions across ChatGPT, Claude and Gemini answers: 88 in May, 72 in October. Raygency agent runs, 2026.

03

Ask every table who sent them

The restaurant that wants more bookings from the concierge starts by counting the ones it already gets.

THE ROI LADDER

Measure the bottom rung first

Pipeline	Deals and orders where the buyer says an assistant sent them
Visits	A GA4 channel for AI, and Search Console's generative AI report
Preference	Named first, named with a reason, named over the rival you lose to
Presence	Share of answers naming you: twenty questions, five runs, every month

Every rung stands on the one below it. Most teams start at the top.

WHAT EACH TOOL SEES

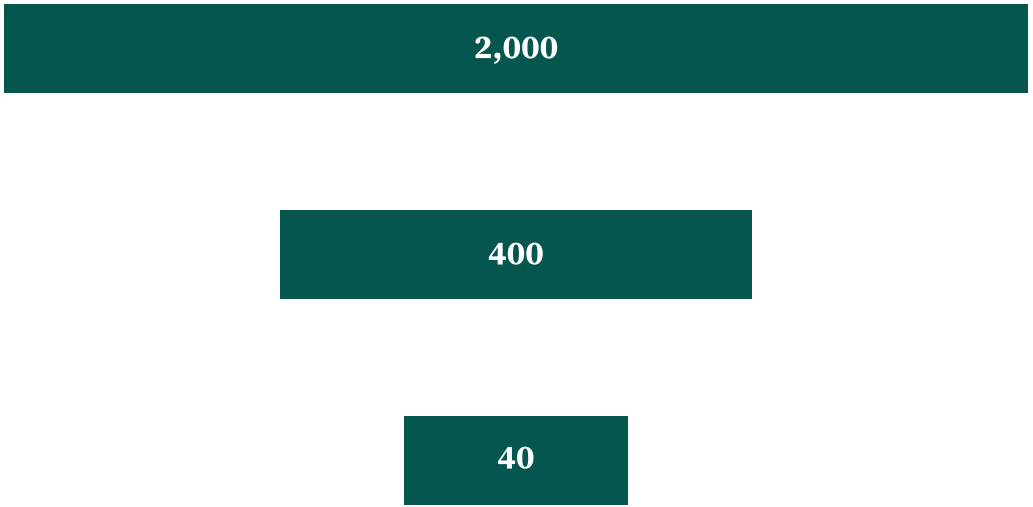

No single tool sees the whole ladder

TOOL	WHAT IT SEES	WHAT IT MISSES	COST
Monthly presence run	Whether you're named	What happens next	Two hours, or the agent
Search Console AI report	Impressions in Google AI	Clicks, queries, other assistants	Free
GA4 AI channel	Visits with a referrer	Apps that strip it	Free, ten minutes
"How did you hear?"	What the buyer remembers	People who skip the field	Free, one form field

Read the four side by side, every month. Each one covers another's blind spot.

A MODEL, NOT A CASE STUDY

Where two thousand buyers go

Ask an assistant about your category
A month. Your sales team's estimate goes here

See you in the answer
At 20% presence, from your twenty question baseline

Become customers
At a 10% shortlist win rate

Illustrative inputs, not measured. Bars are not to scale; the numbers are. The worksheet in your kit runs it on yours.

A MODEL, NOT A CASE STUDY

What a shortlist is worth, on your numbers

THE LINE	WHERE IT COMES FROM	WORKED EXAMPLE
Buyers asking, a month	Your sales team's estimate	2,000
Answers naming you	Your twenty question baseline	20%, so 400
Become customers	Your shortlist win rate	10%, so 40
Value per customer	Your average order	€120, so €4,800
Presence up to 35%	The target you set	+30 customers, +€3,600

Every input is a placeholder. The worksheet in your kit does this arithmetic on yours.

The concierge now books the table.

Shopify opened checkout to AI agents on 28 September. Google's agent commerce hub reached US Merchant Center on 6 October. When the assistant buys, there is no click to measure. Being in the answer is what survives.

MONDAY MORNING

Three things to switch on this week

1

A GA4 channel for AI

One rule catches ChatGPT, Perplexity, Gemini, Claude and Copilot visits. It is in your kit, ready to paste.

2

Search Console's AI report

Impressions only, no clicks, no queries. Still Google's first number on AI search. Bookmark it.

3

One option on your form

"How did you hear about us?" with "ChatGPT or another AI assistant". Assistants often hide the referrer.

Thirty minutes of setup, and next month you have a baseline to beat.

WHERE THIS BREAKS

Three things I'd get wrong if I oversold this

01

Google says it is still SEO

Google's own guide, May 2026: no special markup and no llms.txt needed for its AI features. The fundamentals you already pay for still count. Don't buy a second programme to replace them.

02

AI visitors don't automatically convert better

The largest study so far, 973 shops in Marketing Science 2026: Google organic converted about 13% better than ChatGPT referrals. The value is the shortlist, not the visit.

03

The numbers move, and most of them are sold to you

Answers change from run to run. Most AI visibility data comes from companies who sell tracking, and that includes us. Measure your own: the same questions, five runs, every month.

BEFORE YOU GO

Three things to take with you

1

Keep the kit

The four AEO skills, the prompt pack, the ROI worksheet and the questions for your team. One link, in the chat now.

2

Keep the rule

Check your shortlist like a buyer, every month, five runs. Bring your first result to the snapshot.

3

Book your free AI visibility snapshot

We run twenty buyer questions on your brand across five assistants. Book before 27 November.

Right now an assistant is answering a question about your category.

Nobody on your team has read the answer.
